The more you know about the app, the faster you'll know when new features show up. In version 11.5.2, for example, the brush generator was expanded into the Blob Brush palette by pressing Ctrl/Cmd+B simultaneously. In older versions, you had to press Alt/Option+B to open the brush generator. You can customize the size of how large each brush fill is. Try deleting some of the brushes, making a new one, and playing with size to see. In versions past Photoshop CS2, you could create layers with the Insert Layer menu, but this was in an arbitrary way; some layers erased others. If you inserted layers in a certain sequence, Photoshop consolidated them in a neat way that allowed you to see them in their natural sequence. (This feature was called Smart Objects in CS3.) As new features are added to the application, they can be accessed through the toolbox. To do this, the menu on the left side of the screen changes appearance. This is true even if you're on a keyboard in which menus reside in the far-left corner. The menu of the toolbox changes appearance when you add or remove tools. The current menu, to the right, is called Current Selection; the other is called Toolbox. You can click into the Toolbar menu, which is always present, to change the size of the "handles" on the icons. I sometimes open a large image in Photoshop and see that it's a single, long layer of an image, when in reality it's made up of many, small layers; sometimes what it looks like is a single, flat, evil image-background, when in fact it's hours and hours of time that your brain turned into one long, flat image. In version 11.5, Photoshop opened what you might call a Layers palette, as well as the Backstage palette that, for many people, no longer exists in the last version.
