The upcoming change in default 3D rendering and workflow has many moving parts,

and this topic cannot cover them all. (More on this in the future, but stay tuned.) But to highlight a few points, the 3D Content Creation panel has been removed in most of the new UI, and the legacy 3D tools are being folded into a new workflow based on Substance Designer and Blender. This new workflow will be available in May for desktop users, and will be included in new macOS and Windows applications. New versions of Photoshop (desktop and mobile) are coming, and macOS and Windows users will be able to take advantage of native rendering APIs in a modern way. After you get plenty of practice using the brush tools, Chapter Three takes a look at the selection tools and how to use them to select the objects in your images and arrange them in different ways. You'll learn the ins and outs of the Rectangular Marquee tool too, which lets you draw a rectangle exactly where you want it on your image. And drawing with the Pen tool is fun, because it lets you draw freehand, just like a person. If you want to draw something in perspective or perspective view, you'll learn how to set those parameters. After learning the basic structure of the Photoshop workspace, Chapter Four introduces you to the tools and techniques for retouching photographs. You'll learn how to apply one of the most common retouches—the Levels adjustment—and how to apply and save Levels and Curves presets. Photoshop works as a layer-based editing tool where the layers are positioned and merged. You can reorder the layers. You can move, create, and delete layers. You can also merge layers or cut them. In the process of editing, you can add new layers, resize the file, add effects, and adjust the layer's opacity. You can work with the layers in various ways:

- You can move, resize, create duplicates or remove layers.
- You can hold down the control key while dragging a layer to snap to the edge of layers.
- You can remove a layer in one step or undo changes in a layer by selecting the layer and pressing the backspace key.
